1. General

Extendable up to 4 folds, Oria thermostats offer a wide range of functional flexibility with integrated programmable switches.

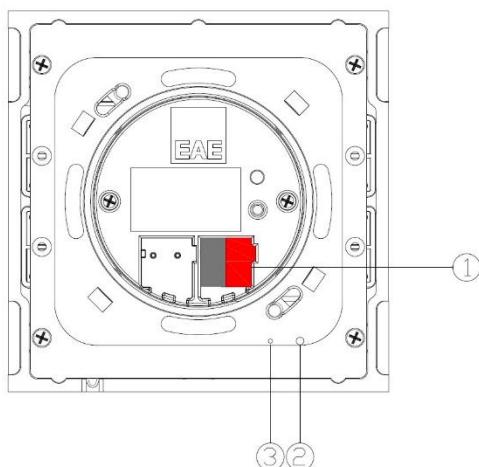

Buttons on Oria thermostats can be programmed to control lighting, shutter/blind drivers, speakers, make scene calls and mimic panic buttons. Each button can be programmed independently for a different function.

2. Device Technology

4. Parameters and Communication Objects

4.1 General

General parameters include configuration of “in operation bit”, total rocker count, telegram limitations, window status, LED and LCD controls.

1.1.20 Thermostat > General

| | | |
|-----------------------|---|---|
| General | In Operation Telegram | <input type="checkbox"/> |
| Rocker 1 | Telegram Limiter | <input type="checkbox"/> |
| Button 1 | Telegram Transmission Delay (after KNX bus recovery) | 1 <input type="button" value="▼"/> |
| Button 2 | SWITCH | |
| Rocker 2 | Switch Configuration | 2 Rocker / 4 Button <input type="button" value="▼"/> |
| Temperature Sensor | Status LED "Operation Indication" Duration | 0,75s <input type="button" value="▼"/> |
| Thermostat Parameters | THERMOSTAT | |
| Heating Control | Window Status | <input type="checkbox"/> |
| Cooling Control | Setpoint Segment | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Fan Control | Temperature Segment in Protection Mode | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Setpoints | Temperature Segment during Regulation Off | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Local Control | | |

Figure 1

4.1.1 Parameters

| Parameter | Settings | Description |
|---|------------------------------|---|
| Enable In Operation | Enable/Disable | In operation can be used to ensure that device is alive and connected to KNX line. |
| In Operation Bit | Off/On | Visible when "Enable In Operation" enabled. Bit value to send as device alive operation |
| In Operation Send Interval[sec] | 0...300...65535 | Visible when "Enable In Operation" enabled. Cyclic time period for sending in operation bit |
| Enable Telegram Limit | Enable/Disable | Limits the number of telegrams to send in certain time period |
| Telegram Limit Period Duration | 50ms, 100ms, ..., 30sn, 1min | Visible when "Enable Telegram Limit" enabled. Time period to check telegram numbers |
| Maximum Telegram Count in Period | 1..100...255 | Visible when "Enable Telegram Limit" enabled. Maximum number of telegrams to send in telegram limit period duration |
| Light Duration of LED | 0,75s, 2.25s, 3.25s | LEDs on duration when status LEDs used as status indication with rockers or push buttons. |
| Rocker Count | 2, 3 ,4 | Number of rockers should be selected compatible with device to be able to use rockers and push buttons correctly. |
| Window Status | Enable/Disable | Enables communication object which will be used to detect window status. When window detected as open thermostat automatically enters "Protect Mode" with error and detected as close will return to the previous mode. |
| LCD Setpoint Segment | Enable/Disable | When disabled current setpoint value will replace temperature segment on LCD and blink for a few seconds, otherwise additional setpoint segment will be used. |
| Temperature Segment in Protection Mode | Enable/Disable | When enabled current temperature value will be shown on LCD while device in Protection Mode. |
| Temperature Segment during Regulation Off | Enable/Disable | When enabled current temperature value will be shown during regulation Off. |

Table 2

4.1.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|--|------------------------|------------|--------------------|-------|
| 0 | General – In operation | Active | 1 Bit DPT 1.002 | CT |
| In operation value (0,1) selected through “In operation bit” parameter will be send via the group address which is linked to this communication object | | | | |
| 49 | Window Status | Open/Close | 1 bit DPT 1.009 | CWT |
| If window status enabled, this communication object will be used to detect window status. If window detected as open thermostat will enter protect mode and will not response mode change commands (over communication object or operating mode button) until window detected as closed through this communication object. | | | | |

Table 3

4.2 Rockers and PushButtons

Total number of rockers can be selected through “Rocker Count” parameter in “General” tab. Buttons on the thermostat can be used as rockers or push buttons. Select the desired operation from the “Rocker N” (N: Rocker number) tab (Figure 2). If configured as push buttons, 2 push button tabs will be visible under “Rocker N” tab (Figure 3). Both rockers and pushbutton have 5 functions, no function, switch, switch and dim, shutter and value operation.

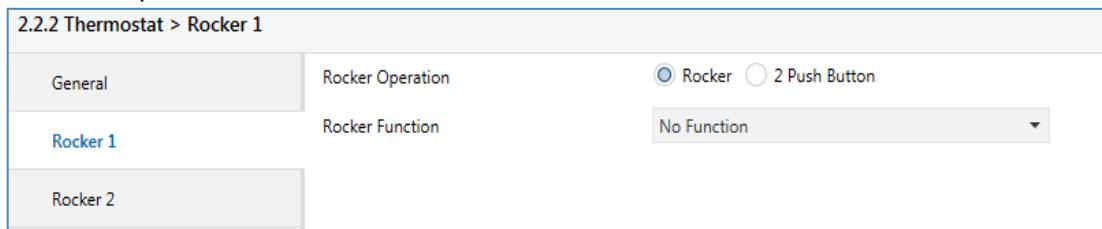

Figure 2

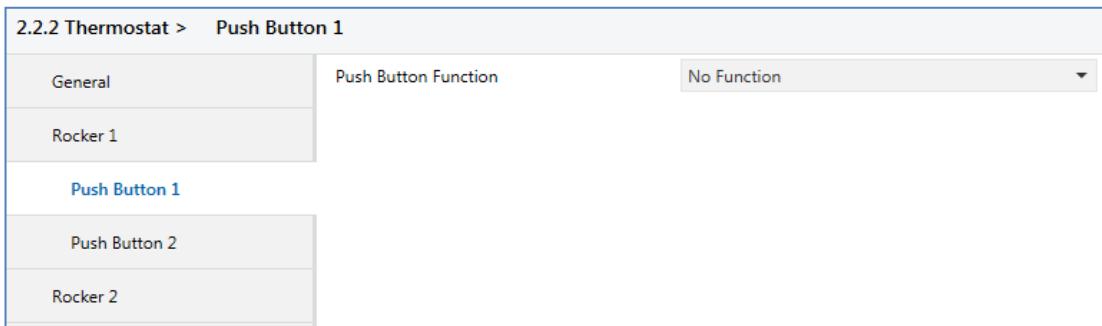

Figure 3

4.2.1 Rockers

Number of rockers should be selected in “General” tabs in parameters and should be chosen as compatible with the device that will be configured. Rockers are numbered from top to bottom, topmost rocker as Rocker 1, below it Rocker 2, and so on. Rockers can be configured as 4 different operations and 1 function to disable rocker (No Function). Operation selection can be configured with “Rocker Function” parameter. Every function enables different parameters and communication objects that will be explained in the following chapters.

| Parameter | Setting | Description |
|-----------|---------|-------------|
|-----------|---------|-------------|

| | | |
|------------------|----------------------|--|
| Rocker Operation | Rocker/2 Push Button | Selects the function of rocker |
| Rocker Function | No Function | Disables the rocker |
| | Switch | Rocker can be used to send on/off telegrams. (For more information Chapter 4.2.1.1) |
| | Switch and Dim | Rocker can send on/off and dimming telegrams. (For more information Chapter 4.2.1.2) |
| | Shutter | Rocker can control shutter, venetian blind, blind, roller and awning. (For more information Chapter 4.2.1.3) |
| | Value Operation | Rocker buttons can send predefined values from different data types. (For more information Chapter 4.2.1.4) |

Table 4

Rockers also have status LEDs which can be configured to indicate state of the operation that is configured.

4.2.1.1.1 Switch

Selecting “Switch” as “Rocker Function“ enables to send 1 bit On(1)/Off(0) telegrams to the group address that is linked to respective communication object. Status LEDs can be configured to notify the current status of operation directly with buttons or using communication objects for confirmation to show current status.

Figure 4

4.2.1.1.1 Parameters

| Parameter | Setting | Description |
|-----------------|---|---|
| Mode of Buttons | Left Button On Right Button Off Left Button Off Right Button On | Select which button is ON button and which button is OFF button |
| Function of LED | LED permanently Off | LED always Off |
| | LED permanently On | LED always On |

| | | |
|----------------------|----------------------------|--|
| | Status Indication | Status LED of last pressed rocker button is on, other rocker button is off. If "Separate Comm Object" parameter selected as "Enable" status LEDs will wait for confirmation from communication object before changing state. |
| | Inverted Status Indication | Status LED of last pressed rocker button is off, other rocker button is on. If "Separate Comm Object" parameter selected as "Enable" status LEDs will wait for confirmation from communication object before changing state. |
| | Operation Indication | Status LED of the pressed rocker button will be on for the time period selected at "Light Duration of LED" parameter at "General" tab. |
| Separate Comm Object | Enable/Disable | Only visible when "Function of LED" selected as "Status Indication" or "Inverted Status Indication". This communication object is the input of confirmation for status LEDs. If selected "Enable" respective communication object should be linked to an appropriate group address |

Table 5

4.2.1.1.2 Communication Objects

| No | Object Name | Function | | Data Type | Flags |
|----|----------------------------|---|--|--------------------|-------|
| 1 | Rocker1 – Telegr.switch | On/Off | | 1 bit DPT 1.001 | CWT |
| | | On/Off telegrams will be sent to group address that is linked to this communication object. | | | |
| 3 | Rocker1 – Status Comm.Obj. | On/Off | | 1 bit DPT 1.002 | CWT |
| | | Confirmation for On/Off switch telegrams will be received from this communication object. If these communications object visible, it must link to an appropriate group address. Otherwise status LEDs will not function correctly. If status confirmation not to be used the communication object should be disabled by "Separate Comm Object" parameter. | | | |

Table 6

4.2.1.2 Switch and Dim

| 2.2.255 Thermostat > Rocker 1 | | |
|-------------------------------|----------------------|--|
| General | Rocker Operation | <input checked="" type="radio"/> Rocker <input type="radio"/> 2 Push Button |
| Rocker 1 | Rocker Function | Switch And Dim |
| Rocker 2 | Mode Of Buttons | <input checked="" type="radio"/> Left Button Brighter(On) Right Button Darker(... <input type="radio"/> Left Button Darker(Off) Right Button Brighter(... |
| Temperature Sensor | Long Press Duration | 1s |
| Thermostat Parameters | Dimming Type | <input type="radio"/> Start Stop <input checked="" type="radio"/> Step Wise |
| Cooling Control | Step Value | 1.56% |
| Fan Control | Step Send Interval | 1s |
| Setpoints | Function Of LED | Status Indication |
| | Separate Comm Object | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |

Figure 5

Rockers can be configured with switching and dimming capability. When configured as “Switch and Dim” rocker buttons will have two modes switch mode and dim mode. When rocker button pressed shorter than time period specified in “Long Press Duration” parameter, rocker button will act as a switch. In switch mode rocker buttons will behave as normal switches as explained in Chapter 4.1.1. When rocker buttons pressed longer than “Long Press Duration” rocker will enter “Dim mode”. Dimming capability can be used in two different types “Start Stop” and “Step Wise”. Which type to use can be configured in “Dimming Type” parameter.

Dimming - Start Stop Type

When rocker button pressed (and not released) and pressed duration exceeds “Long Press Duration” time “Increase, %100” (When on button pressed) or “Decrease, %100” (When off button pressed) dimming level will be send using respective communication object. When button is released “Increase, Break” or “Decrease, Break” value will be sent to stop dimming operation.

Dimming - Step Wise Type

When rocker button pressed (and not released) and pressed duration exceeds “Long Press Duration” time, a step value level configured in “Step Value” parameter will be send using respective communication object. Until button is released same step value will be send periodically with a time interval defined in “Step Send Interval”.

4.2.1.2.1 Parameters

| Parameter | Setting | Description |
|---------------------|---|---|
| Mode of Buttons | Left Button Brighter(On) Right Button Darker(Off) / Left Button Brighter(Off) Right Button Darker(On) | Select which rocker button is on button and which rocker button is off button |
| Long Press Duration | 300ms/400ms/500ms/600ms/800ms/ 1s /1.2s/1.5s/2s/3s/4s/5s/6s/7s/8s/9s/10s | Time interval to switch from “switch mode” to “dimming mode”. |
| Dimming Type | Start Stop / Step Wise | Select dimming type. (Chapter 4.2.1.2) |

| | | |
|----------------------|---|--|
| Step Value | %100/%50/%25/ %12.5 /%6.25/%3.13/% 1.56 | Visible when dimming type is Step Wise. Selects the dimming resolution that will be sending at every “Step Send Interval”. |
| Step Send Interval | 300ms/400ms/500ms/600ms/800ms/ 1s /1.2s/1.5s/2s/3s/4s/5s/6s/7s/8s/9s/10s | Visible when dimming type is Step Wise. Selects the time interval to send dimming increase/decrease values |
| Function of LED | LED Permanently Off | LED always off |
| | LED Permanently On | LED always on |
| | Status Indication | Status LED of last pressed rocker button is on, other rocker button is off. If “Separate Comm Object” parameter selected as “Enable” status LEDs will wait for confirmation from communication object before changing state. |
| | Inverted Status Indication | Status LED of last pressed rocker button is off, other rocker button is on. If “Separate Comm Object” parameter selected as “Enable” status LEDs will wait for confirmation from communication object before changing state. |
| | Operation Indication | Status LED of the pressed rocker button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. |
| Separate Comm Object | Enable / Disable | Only visible when “Function of LED” selected as “Status Indication” or “Inverted Status Indication”. This communication objects is the input of confirmation for status LEDs. If selected as “Enable” respective communication object should be linked to an appropriate group address |

Table 7

4.2.1.2.2 Communication Objects

| No | Object Name | Function | Data type | Flags |
|--|--------------------------|----------|--------------------|-------|
| 1 | Rocker1 – switch | On/Off | 1 bit DPT 1.001 | CWT |
| On/Off telegrams will be send to group address that is linked to this communication object. | | | | |
| 2 | Rocker1 – dimming | Dim | 4 bit DPT 3.007 | CWT |
| Dimming values will be send to group address that is linked to this communication object. | | | | |
| 3 | Rocker1-Status Comm.Obj. | On/Off | 1 bit DPT 1.002 | CWT |
| Confirmation for On/Off switch telegrams will be received from this communication object. If these communication object visible, it must link to an appropriate group address. Otherwise status LEDs will not function correctly. If status confirmation not to be used the communication object should be disabled by “Separate Comm Object” parameter. | | | | |

Table 8

4.2.1.3 Shutter

| 2.2.255 Thermostat > Rocker 1 | | |
|-------------------------------|---------------------|---|
| General | Rocker Operation | <input checked="" type="radio"/> Rocker <input type="radio"/> 2 Push Button |
| Rocker 1 | Rocker Function | Shutter |
| Rocker 2 | Mode Of Buttons | <input checked="" type="radio"/> Left Up Right Down <input type="radio"/> Left Down Right Up |
| Temperature Sensor | Control Type | <input checked="" type="radio"/> Shutter/Venetian blind <input type="radio"/> Blind/Roller/Awning |
| Thermostat Parameters | Function Of LED | LED Permanently On |
| Heating Control | Long Press Duration | 800ms |
| | | Long Press --> Up/Down, Short Press --> Stop/Lamella Adj. |

Figure 6

Selecting “Shutter” for “Rocker Operation” enables shutter operation for rocker buttons. Shutter functions can be configured to control two different shutter operations “Shutter/Venetian Blind” function or “Blind/Roller/Awning” function.

Shutter/Venetian Blind Function

Firstly, select which rocker button is used for “up” operation, which rocker button is used for “down” operation by “Mode of Buttons” parameter. Both buttons have two functions as “short press” function and “long press” function, “Long Press Duration” parameter configures the limit time period for “long press” operation. “Long Press” will be used to move the blind upwards or downwards. “Short press” has two different functions whether blind is moving or not. When blind is moving “short press” acts as a stop button that stops the blinds movement, when blind is not moving “short press” function is used to adjust lamella position.

| | Short Press | Long press |
|-----------------------------|--------------|------------|
| Up Button – Blind Moving | Stop | Up |
| Down Button – Blind Moving | Stop | Down |
| Up Button – Blind Stopped | Lamella Down | Up |
| Down Button – Blind Stopped | Lamella Up | Down |

Table 9

When “Up Button” long pressed “Up” telegram will be transmitted using “Rocker1 – Shutter UP/DOWN” communication object and shutter will start moving upwards until it reaches “Top Position” or “STOP” telegram transmitted using “Rocker1 – STOP/Lamella Adj.” communication object by short pressing “Up Button” or “Down Button”.

When “Down Button” long pressed “Down” telegram will be transmitted using “Rocker1 – Shutter UP/DOWN” communication object and shutter will start moving downwards until it reaches “Bottom Position” or “STOP” telegram transmitted using “Rocker1 – STOP/Lamella Adj.” communication object by short pressing “Up Button” or “Down Button”.

When blind is not moving “Up Button” and “Down Button” operate as lamella adjustment and respective

telegram will be send using “Rocker1-STOP/Lamella Adj.” communication object.

Blind/Roller/Awning Function

Selecting “Control Type” parameter as “Blind/Roller/Awning” disables lamella adjustment functions of rocker buttons. In this control type, when “Up Button” pressed “Up” telegram will be send using “Rocker1 –shutter. UP/DOWN” communication object and pressed again while blind is moving “STOP” telegram will be send using “Rocker1 – STOP/Lamella adj.” communication object. When “Down Button” pressed “DOWN” telegram will be sending using “Rocker1 –shutter. UP/DOWN” communication object and pressed again while blind is moving “STOP” telegram will be send using “Rocker1 – STOP/Lamella adj.” communication object.

4.2.1.3.1 Parameters

| Parameter | Setting | Description |
|---------------------|---|---|
| Mode of Buttons | Left Up Right Down Left Down Right Up | Select which rocker button is “Up Button” and which rocker button is “Down Button”. |
| Control Type | Shutter/Venetian Blind Blind/Roller/Awning | Selects control type of blinds. Shutter/Venetian Blind function includes “Lamella Control” and Blind/Roller/Awning function does not include “Lamella Control”. |
| Function of LED | LED Permanently Off | LED always off |
| | LED Permanently On | LED always on |
| | Status Indication | Visualize blind’s state using status LEDs of up and down buttons. *[5] |
| | Operation Indication | Status LED of the pressed rocker button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. |
| Long Press Duration | 300ms/ 400ms/ 500ms/ 600ms/ 800ms / 1s/ 1.2s/ 1.5s/ 2s/ 3s/ 4s/ 5s/ 6s/ 7s/ 8s/ 9s/ 10s | Time interval to switch from short press to long press |

Table 10

*[5] LED Function – Status Indication

Status indication operates the same way for “Shutter/Venetian Blind” and “Blind/Roller/Awning”. LEDs status respective to blind’s state is given below

| | Up Button - Status LED | Down Button - Status LED |
|---------------------------|------------------------|--------------------------|
| Moving upward | Blink | Off |
| Moving downward | Off | Blink |
| At top position | On | Off |
| At bottom position | Off | On |
| Stop between top - bottom | Off | Off |

Table 11

When “Function of Led” selected as “Status Indication”, “Top Position” and “Bottom Position” communication objects given below must be linked to the appropriate group addresses for the status LEDs to function

4.2.1.3.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|--|-----------------------------|-------------------|--------------------|-------|
| 1 | Rocker1-shutter UP/DOWN | Up/Down | 1 bit DPT 1.008 | CWT |
| This communication object will be used to start blind movement. | | | | |
| 2 | Rocker1 – STOP/Lamella adj. | Stop/Lamella adj. | 1 bit DPT 1.002 | CWT |
| When “Control Type” parameter is “Shutter/Venetian Blind” this communication object is used to stop movement of blind and adjust lamella position, otherwise when “Control Type” parameter is “Blind/Roller/Awning” only used for stopping blind movement. | | | | |
| 3 | Rocker1-Top Position | True/False | 1 bit DPT 1.002 | CWT |
| This communication object should be linked to an appropriate group address that will be used to detect whether blind is at “Top Position” (True) or not (False). | | | | |
| 4 | Rocker1-Bottom Position | True/False | 1 bit DPT 1.002 | CWT |
| This communication object should be linked to an appropriate group address that will be used to detect whether blind is at “Bottom Position” (True) or not (False). | | | | |

Table 12

4.2.1.4 Value Operation

Figure 7

Rocker buttons can be configured to send predefined values from different data types. Values selected for both rocker buttons will be transmitted over the same communication object.

4.2.1.4.1 Parameters

| Parameter | Setting | Description |
|-----------------|----------------------------|--|
| Function of Led | LED Permanently Off | LED always off |
| | LED Permanently On | LED always on |
| | Operation Indication | Status LED of the pressed rocker button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. |

| | | | |
|--|--------------------|---|-------------------|
| Data Type | | No Reaction 1 bit value 1byte value [0...255] Percent value [%0...%100] 2 byte value [-32768...32767] 2 byte value [0...65535] 4 byte value [floating point] 4 byte value [0...4294967295] | Select data type. |
| Left Button of Rocker | | | |
| Sent value | 0/1 | | |
| Transmitted value [0...255] | 0...255 | | |
| Send percent value [%0...%100] | 0...80...100 | | |
| Transmitted value [-32768...32767] | -32768...0...32767 | | |
| Transmitted value [0...65535] | 0...65535 | | |
| Float decimal | -128...0...127 | | |
| Float rational | 0...99 | | |
| Transmitted value [0...4294967295] | 0...4294967295 | | |
| Right Button of Rocker – Operate the same way as Left Button of Rocker | | | |

Table 13

4.2.1.4.2 Communication Objects

| No | Object Name | Function | Data type | Flags |
|--|------------------------------------|------------|----------------------|-------|
| 1 | PushButton1 – value[0,1] | True/False | 1 bit DPT 1.002 | CWT |
| Enabled when “Data Type” selected as “1 bit value” | | | | |
| | PushButton1– value[0...255] | Send | 1 byte DPT 5.010 | CWT |
| Enabled when “Data Type” selected as “1byte value [0...255]” | | | | |
| | PushButton1– value[0...255] | Send | 1 byte DPT 5.001 | CWT |
| Enabled when “Data Type” selected as “Percent value [%0...%100]” | | | | |
| | PushButton1- value[-32768...32767] | Send | 2 byte DPT 8.001 | CWT |
| Enabled when “Data Type” selected as “2 byte value [-32768...32767]” | | | | |
| | PushButton1- value[0...65535] | Send | 2 byte DPT 7.001 | CWT |
| Enabled when “Data Type” selected as “2 byte value [0...65535]” | | | | |
| | PushButton1- value[temperature] | Send | 4 byte DPT 14.068 | CWT |
| Enabled when “Data Type” selected as “4 byte value [floating point]” | | | | |
| | PushButton1-value[0...4294967295] | Send | 4 byte DPT 12.001 | CWT |
| Enabled when “Data Type” selected as “4 byte value [0...4294967295]” | | | | |

| | | | | |
|---|---|------------|----------------------|-----|
| 2 | PushButton1-long – value[0,1] | True/False | 1 bit DPT 1.002 | CWT |
| | Enabled when “Long Press Data Type” selected as “1 bit value” | | | |
| | PushButton1-long – value[0...255] | Send | 1 byte DPT 5.010 | CWT |
| | Enabled when “Long Press Data Type” selected as “1byte value [0...255]” | | | |
| | PushButton1– value[0...255] | Send | 1 byte DPT 5.001 | CWT |
| | Enabled when “Long Press Data Type” selected as “Percent value [%0...%100]” | | | |
| | PushButton1 - long- value[-32768...32767] | Send | 2 byte DPT 8.001 | CWT |
| | Enabled when “Long Press Data Type” selected as “2 byte value [-32768...32767]” | | | |
| | PushButton1- long - value[0...65535] | Send | 2 byte DPT 7.001 | CWT |
| | Enabled when “Long Press Data Type” selected as “2 byte value [0...65535]” | | | |
| | PushButton1-long- value[temperature] | Send | 4 byte DPT 14.068 | CWT |
| | Enabled when “Long Press Data Type” selected as “4 byte value [floating point]” | | | |
| | PushButton1- long - value[0...4294967295] | Send | 4 byte DPT 12.001 | CWT |
| | Enabled when “Long Press Data Type” selected as “4 byte value [0...4294967295]” | | | |

Table 14

4.2.2 Push Buttons

Number of rockers should be selected in “General” tabs in parameters and should be chosen as compatible with the device that will be configured. Push buttons are numbered from top to bottom – right to left, topmost right push button as push button 1, near it push button 2, and so on. Push buttons can be configured as 4 different operations and 1 function to disable push button (No Function). Operation selection can be configured from “Push Button N” (N: Push button number) tab, visible when “Rocker Operation” selected as “2 Push Buttons”. Every function enables different parameters and communication objects that will be explained in the following chapters.

| Parameter | Setting | Description |
|----------------------|--------------------|---|
| Push Button Function | No Function | Disables the push button |
| | Switch | Push buttons can be used to send on/off telegrams. (For more information Chapter 4.2.2.1) |
| | Switch and Dim | Push buttons can send on/off and dimming telegrams. (For more information Chapter 4.2.2.2) |
| | Shutter | Push button can control shutter, venetian blind, blind, roller and awning. (For more information Chapter 4.2.2.3) |
| | Value Operation | Push button can send predefined values from different data types. (Refer Section 4.2.2.4) |

Table 15

Push buttons also have status LEDs which can be configured to indicate state of the operation that is configured.

4.2.2.1 Switch

2.2.2 Thermostat > Push Button 1

| | | |
|---------------|----------------------|---|
| General | Push Button Function | Switch |
| Rocker 1 | Command On Press | Toggle |
| Push Button 1 | Command On Release | No Command |
| Push Button 2 | Function Of LED | Status Indication |
| | Separate Comm Object | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |

Selecting “Switch” as “Push Button Function” enables to send 1 bit On(1)/Off(0) telegrams to the group address that is linked to respective communication object. Pressing and releasing buttons can be assigned to different commands (On, Off, Toggle and No Command). Status LEDs can be configured to notify the current status of operation directly with buttons or using communication objects for confirmation to show current status.

4.2.2.1.1 Parameters

| Parameter | Setting | Description |
|----------------------|----------------------------|--|
| Command on Press | On/Off/Toggle/No command | Selects button function when button pressed. |
| Command on Release | On/Off/Toggle/No command | Selects button function when button released. |
| Function of LED | LED permanently Off | LED always Off |
| | LED permanently On | LED always On |
| | Status Indication | Last transmitted command “on” -> LED on Last transmitted command “off” -> LED off If “Separate Comm Object” enabled, status LEDs will wait for confirmation before changing status. |
| | Inverted Status Indication | Last transmitted command “on” -> LED off Last transmitted command “off” -> LED on If “Separate Comm Object” enabled, status LEDs will wait for confirmation before changing status. |
| | Operation Indication | Status LED of the pressed push button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. Last transmitted command value has no effect to the status led operation. |
| Separate Comm Object | Enable/Disable | Only visible when “Function of LED” selected as “Status Indication” or “Inverted Status Indication”. This communication objects is the input of confirmation for status LEDs. If selected “Enable” respective communication object should be linked to an appropriate group address. |

Table 16

4.2.2.1.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|----|-------------|----------|-----------|-------|
|----|-------------|----------|-----------|-------|

| | | | | |
|---|-------------|------------------|--------------------|-----|
| 1 | PushButton1 | switch | 1 bit DPT 1.001 | CWT |
| On/Off telegrams will be send to group address that is linked to this communication object. | | | | |
| 3 | PushButton1 | Status Comm.Obj. | 1 bit DPT 1.002 | CWT |
| Confirmation for On/Off switch telegrams will be received from this communication object. If these communications object visible, it must link to an appropriate group address. Otherwise status LEDs will not function correctly. If status confirmation not to be used the communication object should be disabled by "Separate Comm Object" parameter. | | | | |

Table 17

4.2.2.2 Switch and Dim

2.2.255 Thermostat > Push Button 1

| | | |
|-----------------------|----------------------|---|
| General | Push Button Function | Switch And Dim |
| Rocker 1 | Dim Operation | Darker(ShortPress Off) |
| Push Button 1 | Long Press Time | 500ms |
| Push Button 2 | Dimming Type | <input type="radio"/> Start Stop <input checked="" type="radio"/> Step Wise |
| Rocker 2 | Step Value | 12.5% |
| Temperature Sensor | Step Send Interval | 1s |
| Thermostat Parameters | Function Of LED | Status Indication |
| | Separate Comm Object | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |

Figure 9

When push button function selected as "Switch and Dim" push button can be configured in three different ways to control brightness value.

| | Short Press | Long press |
|-------------------------------------|--------------------------------|-------------------------------|
| Darker(Short Press Off) | Off (%0) | Decrease, (%XX) |
| Brighter(Short Press On) | On(%100) | Increase,(%XX) |
| Darker/Brighter(Short Press Toggle) | Toggle between Darker/Brighter | Decrease,(%XX)/Increase,(%XX) |

Table 18

%XX values can have different values relative to the "Dimming Type" parameter. "Dimming Type" parameter allows two different types of dimming functionality "Start Stop" and "Step Wise".

Dimming - Start Stop Type

When push button pressed (and not released) and pressed duration exceeds "Long Press Duration" time "Increase, %100" (When button in Brighter mode) or "Decrease, %100" (When button in Darker mode) dimming level will be send using respective communication object. When button released "Increase, Break" or "Decrease, Break" value will be send.

Dimming - Step Wise Type

When push button pressed (and not released) and pressed duration exceeds "Long Press Duration" time, a step

value level configured in “Step Value” parameter will be send using respective communication object. If button mode is “Darker”, “Decrease, % [Step Value]”, else button mode is “Brighter”, “Increase, % [Step Value]” values will be send. Until button is released same step value will be send periodically with a time interval defined in “Step Send Interval”.

4.2.2.2.1 Parameters

| Parameter | Setting | Description |
|----------------------|--|--|
| Dim Operation | Darker(Short Press Off) Brighter(Short Press On) Darker/Brighter (Short Press Toggle) | Select push button dim operation. (For more information Chapter 4.2.2.2) |
| Long Press Time | 300ms/400ms/500ms/600ms/800ms/ 1s / 1.2s / 1.5s / 2s / 3s / 4s / 5s / 6s / 7s / 8s / 9s / 10s | Time interval to switch from “switch/toggle mode” to “dimming mode”. |
| Dimming Type | Start Stop / Step Wise | Select dimming type. (For more information Chapter 4.2.2.2) |
| Step Value | %100 / %50 / %25 / %12.5 / %6.25 / %3.13 / % 1.56 | Visible when dimming type is Step Wise. Selects the dimming resolution that will be sending at every “Step Send Interval”. |
| Step Send Interval | 300ms/400ms/500ms/600ms/800ms/ 1s / 1.2s / 1.5s / 2s / 3s / 4s / 5s / 6s / 7s / 8s / 9s / 10s | Visible when dimming type is Step Wise. Selects the time interval to send dimming increase/decrease values |
| Function of LED | LED Permanently Off | LED always off |
| | LED Permanently On | LED always on |
| | Status Indication | Last transmitted command “on” -> LED on Last transmitted command “off” -> LED off If “Separate Comm Object” enabled, status LEDs will wait for confirmation before changing status. |
| | Inverted Status Indication | Last transmitted command “on” -> LED off Last transmitted command “off” -> LED on If “Separate Comm Object” enabled, status LEDs will wait for confirmation before changing status. |
| | Operation Indication | Status LED of the pressed push button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. |
| Separate Comm Object | Enable / Disable | Only visible when “Function of LED” selected as “Status Indication” or “Inverted Status Indication”. This communication objects is the input of confirmation for status LEDs. If selected “Enable” respective communication object should be linked to an appropriate group address. |

Table 19

4.2.2.2.2

Communication Objects

| No | Object Name | Function | Data type | Flags |
|---|------------------------------|----------|--------------------|-------|
| 1 | PushButton1 – switch | On/Off | 1 bit DPT 1.001 | CWT |
| On/Off telegrams will be send to group address that is linked to this communication object. | | | | |
| 2 | PushButton1 – dimming | Dim | 4 bit DPT 3.007 | CWT |
| Dimming values will be send to group address that is linked to this communication object. | | | | |
| 3 | PushButton1-Status Comm.Obj. | On/Off | 1 bit DPT 1.002 | CWT |
| Confirmation for On/Off switch telegrams will be received from this communication object. If these communications object visible, it must link to an appropriate group address. Otherwise status LEDs will not function correctly. If status confirmation not to be used the communication object should be disabled by "Separate Comm Object" parameter. | | | | |

Table 20

4.2.2.3 Shutter

2.2.255 Thermostat > Push Button 1

| | | |
|---|----------------------|---|
| General | Push Button Function | Shutter |
| Rocker 1 | Button Function | Up |
| Push Button 1 | Control Type | <input checked="" type="radio"/> Shutter/Venetian blind <input type="radio"/> Blind/Roller/Awning |
| Push Button 2 | Function Of LED | Status Indication |
| Rocker 2 | Long Press Duration | 300ms |
| Long Press --> Up/Down, Short Press --> Stop/Lamella Adj. | | |

Figure 10

Selecting "Shutter" for "Push Button Function" enables shutter operation for push buttons. Shutter functions can be configured to control two different shutter operations "Shutter/Venetian Blind" function or "Blind/Roller/Awning" function. In both functions push button can be configured as 3 different button function; Up, Down and Toggle. When push button selected as up or down, that button can only move the blind and lamella to the configured direction. For example, if configured as up button, push button can be used to move the blind up and adjust the lamella down. If push button configured as toggle button, single button can be used to move the blind up – down and adjust lamella up – down.

Shutter/Venetian Blind Function

When "ControllerType" configured as "Shutter/Venetian Blind", lamella operations of blind control will be enabled as "short press" function of the push button. Also, "Button Function" parameter enables the use of push button 3 different ways;

Up: "Long Press" moves the blind upwards; "Short Press" operates two different ways, short pressed while the blind is moving, stops the blind, short pressed while the blind is not moving adjust the lamella position down.

Down: "Long Press" moves the blind downwards; "Short Press" operates two different ways, short

EAE KNX Oria Thermostat**Oria Thermostat PM R2.0**

pressed while the blind is moving, stops the blind, short pressed while the blind is not moving adjust the lamella position up.

Toggle: “Long Press” moves the blind upwards or downwards toggling the last “Long Press” action. For example, if last state was up, when push button long pressed, it will send “Down” telegram. Everytime push button long pressed it will toggle its last state. If push button short pressed while the blind is moving upward or downward “Short Press” will stop the blind, if the blind is not moving “Short Press” will adjust the lamella. Lamella adjustment will operate respective to the last state, for example if the last “Long Press” action was up, then lamella will be adjusted down when push button short pressed and if the last “Long Press” action was down, then lamella will be adjusted up when push button short pressed.

Blind/Roller/Awning Function

When “Controller Type” configured as “Blind/Roller/Awning Function” lamella operations of blind control will be disabled and “short press” will only stop the movement of the blind. “Button Function” parameter enables the use of push button 3 different ways;

Up: “Long Press” moves the blind upwards; “Short Press” stops the blind.

Down: “Long Press” moves the blind downwards; “Short Press” stops the blind.

Toggle: “Long Press” action moves the blind upwards or downwards toggling the last “Long Press” action. For example, if last state was up, when push button long pressed it will send “Down” telegram. Everytime push button long pressed it will toggle its last state. “Short Press” stops the blind whether it’s moving upwards or downwards

4.2.2.3.1 Parameters

| Parameter | Setting | Description |
|----------------------|---|---|
| Push Button Function | Up / Down / Toggle | Chapter 4.2.2.3 |
| Control Type | Shutter/Venetian Blind Blind/Roller/Awning | Selects control type of blinds. Shutter/Venetian Blind function includes “Lamella Control” and Blind/Roller/Awning function does not include “Lamella Control”. |
| Function of LED | LED Permanently Off | LED always off |
| | LED Permanently On | LED always on |
| | Status Indication | Visualize blind’s state using status LEDs of up and down buttons. *[6] |
| | Operation Indication | Status LED of the pressed rocker button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. |
| Long Press Duration | 300ms/ 400ms/ 500ms/ 600ms/ 800ms/ 1s/ 1.2s/ 1.5s/ 2s/ 3s/ 4s/ 5s/ 6s/ 7s/ 8s/ 9s/ 10s | Time interval to switch from short press to long press |

Table 21

4.2.2.3.2 Communication Objects

*[6] LED Function – Status Indication

Status indication operates the same way for “Shutter/Venetian Blind” and “Blind/Roller/Awning”. LEDs status respective to blind’s state and “Button Function” configuration given below;

| | Up Mode | Down Mode | Toggle Mode |
|---------------------------|---------|-----------|-------------|
| Moving upward | Blink | Off | Blink |
| Moving downward | Off | Blink | Blink |
| At top position | Off | Off | Off |
| At bottom position | Off | Off | Off |
| Stop between top - bottom | Off | Off | Off |

Table 22

When “Function of Led” selected as “Status Indication”, “Top Position” and “Bottom Position” communication objects given below must be linked to the appropriate group addresses for the LEDs to function correctly.

4.2.2.4 Value Operation

| 2.2.25 Thermostat > Push Button 1 | |
|-----------------------------------|--|
| General | Push Button Function: Value Operation |
| Rocker 1 | Function Of LED: LED Permanently Off |
| Push Button 1 | Data Type: 2 byte value [0...65535] transmitted value [0...65535]: 0 Long Press Request: Yes Long Press Duration: 100ms |
| Push Button 2 | Long Press Data Type: 2 byte value [-32768...32767] |
| Rocker 2 | Long Press: 0 |
| Temperature Sensor | |
| Thermostat Parameters | |
| Heating Control | |

Figure 11

Push button can be configured to send predefined values from different data types. Additionally, a long press request can be enabled to be used as a secondary value operation.

4.2.2.4.1 Parameters

| Parameter | Setting | Description |
|-----------------|----------------------|--|
| Function of Led | LED Permanently Off | LED always off |
| | LED Permanently On | LED always on |
| | Operation Indication | Status LED of the pressed rocker button will be on for the time period selected at “Light Duration of LED” parameter at “General” tab. |

| | | |
|------------------------------------|--|--|
| Data Type | No Reaction 1 bit value 1byte value [0...255] Percent value [%0...%100] | Select data type. |
| | 2 byte value [-32768...32767] 2 byte value [0...65535] 4 byte value [floating point] 4 byte value [0...4294967295] | |
| Sent value | 0/1 | Visible when "Data Type" selected as "1 bit value". |
| Transmitted value [0...255] | 0...255 | Visible when "Data Type" selected as "1 byte value". |
| Send percent value [%0...%100] | 0...80...100 | Visible when "Data Type" selected as "percent value". |
| Transmitted value [-32768...32767] | -32768...0...32767 | Visible when "Data Type" selected as "2 byte value [-32768...32767]". |

| Float decimal | -128...0...127 | Visible when "Long Press Data Type" selected as "4 byte value [floating point]". |
| Float rational | 0...99 | Visible when "Long Press Data Type" selected as "4 byte value [floating point]". |

| | | |
|---------------------------------------|----------------|--|
| Transmitted value [0...4294967295] | 0...4294967295 | Visible when "Long Press Data Type" selected as "4 byte value [0...4294967295]". |
|---------------------------------------|----------------|--|

Table 23

4.3 Temperature Sensor

Temperature sensor and temperature status parameters should be configured from "Temperature Sensor" tab.

2.2.2 Thermostat > Temperature Sensor

| | | |
|-----------------------|-----------------------------|---|
| General | Temperature Unit | <input checked="" type="radio"/> Celcius (°C) <input type="radio"/> Fahrenheit (°F) |
| Rocker 1 | Offset (1/10 K) | 0 |
| Rocker 2 | Cyclic Time (in sec) | 10 |
| Temperature Sensor | Send Temperature | <input type="radio"/> Cyclic <input checked="" type="radio"/> Cyclic and Change |
| Thermostat Parameters | Minimum Difference (1/10 K) | 1 |

Figure 12

4.3.1 Parameters

| Parameter | Function | Description |
|----------------------|------------------------------|---|
| Temperature Unit | Celsius(°C) / Fahrenheit(°F) | Select temperature unit. After selection all temperature related parameters and communication objects should be enter as selected unit. |
| Offset (1/10 K) | -128...0...127 | Offset value entered here will be added to measured temperature. It can be used to compensate for temperature difference caused by thermostat placement. Entered value will be divided by 10. |
| Cyclic Time (in sec) | 10...30...65535 | Cyclic time period to send temperature from "Current Temperature" communication object. |
| Send Temperature | Cyclic / Cyclic and Change | Selects whether temperature will be send periodically or periodically and in case of a change in temperature. Minimum change value defined in "Minimum Difference" parameter. |

| | | |
|-----------------------------|---------|--|
| Minimum Difference (1/10 K) | 1...255 | Only visible if "Send Temperature" selected as "Cyclic and Change". Selects minimum change in temperature that will trigger transmission of temperature. |
|-----------------------------|---------|--|

Table 24

4.3.2 Communication Objects

| No | Object name | Function | Data Type | Flags |
|--|--------------------------|-------------|---------------------|-------|
| 55 | Current Temperature (°C) | Temperature | 2 byte DPT 9.001 | CRT |
| | Current Temperature (°F) | Temperature | 2 byte DPT 9.027 | CRT |
| Communication objects DPT should be decided according to the selected temperature unit. Temperature telegrams will be send when a temperature change defined at "Minimum Difference" parameter occurs or cyclic time period overflows. | | | | |

Table 25

4.4 Thermostat

2.2.255 Thermostat > Thermostat Parameters

| | | |
|-----------------------|---|--|
| General | Control Mode | Heat/Cool |
| Rocker 1 | DeadBand (1/10 K) | 40 |
| Rocker 2 | Control Output Type | <input type="radio"/> 1 Comm Object <input checked="" type="radio"/> 2 Comm Object |
| Temperature Sensor | Control Mode (Heat, Cool, Heat/Cool) | <input type="radio"/> Automatic <input checked="" type="radio"/> Manual (via Object) |

| Status | Status Comm Object Type | <input checked="" type="radio"/> 4 Bits (1=Enable) <input type="radio"/> 1 Byte (0=Comfort, 1=Night, 2=Away, 3=Protect...) |
| Local Control | <p>*Note: When Heat/Cool control value comm objects selected as different DPT, control output type should be over 2 comm object</p> | |

Figure 13

Parameters related to thermostat control should be configured in this tab. Whether thermostat will be used for heating, cooling or both should be selected here. When heat/cool control activated a new tab will be open

under “Thermostat Parameters” tab. Controller operation should be configured in respective tabs for heating, cooling and if enabled fan control. When control mode selected as “Heat/Cool”, configuration parameters for switchover (transition from heating to cooling or vice versa) conditions should be entered here.

4.4.1 Parameters

| Parameter | Setting | Description |
|--|--|---|
| Control Mode | Heat Cool Heat/Cool | Select whether thermostat will be used for heating, cooling or both |
| Deadband (1/10K) | 5...40...255 | Only visible when “Control Mode” is “Heat/Cool”. Entered value will be divided by 10. Temperature difference between ambient temperature and setpoint temperature exceeds half of this value a control mode switchover will be triggered if control mode switchover is automatic*[2]. |
| Control Output Type | 1 Comm Object/2 Comm Object | Only visible when “Control Mode” is “Heat/Cool”. Selects whether heat control value and cool control value will be send over separate communication objects or single communication object.*[3] |
| Control Mode (Heat, Cool, Heat/Cool) | | |
| Switchover Type | Automatic / Manual (via Object) | Selects whether control mode switchover will be controlled by thermostat or controlled manually using this communication object. |
| Switchover Comm Object Type | 1 Bit (DPT 1.100) / 1 byte (DPT 20.105) | Selects the control mode switchover communication object type. |
| Send Current Mode Cyclic Time (in min) | 1...5...255 | Selects cyclic time period (in minutes) to transmit control mode switchover object. |
| Operating Mode (Comfort, Night, Away, Protect) | | |
| Switchover Comm Object Type | 1 byte / 4 bits | Selects the data type for operating mode switchover communication object type. |
| Status Comm Object Type | 4 bits / 1 byte | Selects the data type for operating mode status communication object type. |

Table 26

*[3] For example, control mode: heating, control mode switchover: automatic, setpoint: 25 °C, deadband: 40, control mode will switch to cooling if ambient temperature drops below $25 - (40/10)/2 = 23$ °C. When in cooling mode control mode will switch to heating if ambient temperature increase over $25 + (40/10)/2 = 27$ °C.

*[4] “Control Output Type” parameter should only be used as “1 Comm Object” when heat and cool control values have same data types (1 bit - 1 bit, 1-byte – 1 byte).

4.4.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|--|-----------------------|-----------------------|----------------------|-------|
| 57 | Operating Mode | Select Operating Mode | 1 byte DPT 5.011 | CW |
| | Comfort mode | Enable | 1 bit DPT 1.003 | CW |
| 58 | Night Mode | Enable | 1 bit DPT 1.003 | CW |
| 59 | Away Mode | Enable | 1 bit DPT 1.003 | CW |
| 60 | Protect Mode | Enable | 1 bit DPT 1.003 | CW |
| <p>“Operating Mode” is visible when “Switchover Comm Object Type” is “1 byte”. Values for enabling different operating modes; 0: Comfort Mode, 1: Night Mode, 2: Away Mode, 3: Protect Mode.</p> | | | | |
| <p>“Comfort Mode”, “Night Mode”, “Away Mode” and “Protect Mode” are visible when “Switchover Comm Object Type” is “4 bits”. Sending “True (1)” to this communication objects enables respective operating mode.</p> | | | | |
| 63 | Switchover | Control Mode Status | 1 bit DPT 1.100 | CRT |
| | Switchover | Control Mode | 1 bit DPT 1.100 | CRWT |
| | Switchover | Control Mode Status | 1 byte DPT 20.105 | CRT |
| | Switchover | Control Mode | 1 byte DPT 20.105 | CWRT |
| <p>When “Switchover Type” is “Automatic” acts as a status communication object and sends current control mode telegram from this communication object. When “Switchover Type” is “Manual (via Object)” acts as a control communication object and current control mode can be changed using this communication object.</p> | | | | |
| 74 | Status Operating Mode | Operating Mode Status | 1 byte DPT 5.010 | CRT |
| | Status Comfort | Enabled | 1 bit DPT 1.002 | CRT |
| 75 | Status Night | Enabled | 1 bit DPT 1.002 | CRT |
| 76 | Status Away | Enabled | 1 bit DPT 1.002 | CRT |
| 77 | Status Protect | Enabled | 1 bit DPT 1.002 | CRT |

"Status Operating Mode" is visible when "Status Comm Object Type" is "1 byte". Values for different operating modes;

0: Comfort Mode, 1: Night Mode, 2: Away Mode, 3: Protect Mode.

"Status Comfort", "Status Night", "Status Away" and "Status Protect" are visible when "Status Comm Object Type" is "4 bits". When "Status Comm Object Type" is "4 bits" and an operating mode switchover occurs a "False (0)" telegram will be sent from previous operating modes communication object.

For example; while in Night mode and "Enable Away Mode" telegram received,

Status Night -> False

Status Away -> True

Table27

4.4.3 Control Types

Thermostat uses 5 different control types; these are PI Continuous, PI PWM, On/Off, Fan Coil and Split.

Operation of every control type explained in the following chapters.

| | Control Type | Output Type | Fan |
|---------------|--------------|--------------------|----------|
| PI Continuous | PI | 1 byte (%0...%100) | Disabled |
| PI PWM | PI | 1 bit (On - Off) | Disabled |
| On/Off | On/Off | 1 bit(On - Off) | Disabled |
| Fan Coil | PI | 1 byte (%0...%100) | Enabled |
| Split | None | None | Enabled |

Table 28

4.4.3.1 PI Continuous

Uses PI algorithm to calculate control signal and 1 byte (%0...%100) floating values as output, PI values should be selected compatible with the room that wants to be controlled. Default values are given for an average room and for different rooms PI values must be readjusted for better performance. As a general rule;

KP value: Changes the speed of the control and decreasing KP value increase the control speed. If given too low might cause overshoot, and given too large cause control to operate too slow.

KI value: More inactive the system smaller KI value should be.

Note finding optimum values for a specific room might require some trial and error. Using default values as a reference point and increase and decreasing these values according to the directions given above might increase controller performance.

4.4.3.2 PI PWM

Uses PI algorithm as controller to calculate control signal and 1 bit value as output, since PI algorithm outputs 1 byte floating value PWM method used to realize this output as 1 bit. PWM (Pulse with Modulation) requires a PWM cycle as period and uses control output to calculate duty cycle. For example, PWM cycle: 10 min, PI output: %20, Then an "on" telegram will be send at the beginning of 10 min cycle and "off" telegram at $10 \times 20 / 100 = 2$ min. Note that PI values and PWM cycle should be selected appropriate to room. As a general rule more inactive the system larger the PWM cycle should be.

4.4.3.3 On/Off

On/Off controller operate as a simple switch around the given setpoint using hysteresis values. Hysteresis values prevent the thermostat from oscillation and give larger margin to turning heat or cool on or off. When system is more active hysteresis values should be given larger and more inactive values can be given smaller.

4.4.3.4 Fan coil

Fan coil uses the same control type and same output type as “PI Continuous”, only difference fan coil enables “Fan Control” parameters and communication objects.

4.4.3.5 Split

Split controller does not directly control the split AC, So ambient temperature must be controlled by split AC's controller. Therefore, “Ambient Temperature” and “Setpoint Temperature” of split ACs communication objects should be linked to “Current Temperature” and “Current Setpoint” communication objects. Otherwise, split unit will be unaware of setpoint and ambient temperature and temperature control will not function correctly. “Split Heat” and “Split Cool” communication objects are given to only to notify the split AC when there is a control mode change (heat - cool). Also, when both heating controller and cooling controller configured as “Split Unit” only one “Split Heat/Cool” communication object will be revealed regardless of “Control Output Type” parameter in “Thermostat Parameters” tab.

4.4.4 Heating Control

Selection of the heating control type, parameters of the selected control type should be configured here.

4.4.4.1 PI Continuous

| 2.2.255 Thermostat > Heating Control | | |
|--------------------------------------|----------------------------|---|
| General | Controller Type | PI Continuous |
| Rocker 1 | Cyclic Interval (in min) | 5 |
| Rocker 2 | Inverse Output | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| Temperature Sensor | Proportional Gain KP | 66 |
| Thermostat Parameters | Integral Gain KI (1/1000) | 32 |
| Heating Control | Maximum Control Signal (%) | 100 |
| Cooling Control | Minimum Control Signal (%) | 0 |
| | Transmit On Modification | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |

Figure 14

For more information how the PI parameters should be selected Chapter 4.4.3.1

4.4.4.1.1 Parameters

| Parameter | Setting | Description |
|----------------------------|------------------|---|
| Cyclic Interval | 1...5...255 | Time period to send heating control value over “Heating Control Value” communication object. |
| Inverse Output | Enable / Disable | Invert the output of the controller. For example if normal output is %80, then inverted output is %20. |
| Proportional Gain KP | 1...66...255 | Proportional gain of PI algorithm |
| Integral Gain KI (1/1000) | 1...32...255 | Integral gain of PI algorithm, given value divided by 1000. |
| Maximum Control Signal (%) | 0...100 | Maximum control signal value. |
| Minimum Control Signal (%) | 0...100 | Minimum control signal value |
| Transmit on Modification | Enable / Disable | When control signal change more than (%4), heating control value will be transmitted over “Heating Control Value” communication object. |

Table 29

4.4.4.1.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|----|--------------------|----------|---------------------|-------|
| 61 | Heat Control Value | Send | 1 byte DPT 5.001 | CT |

Heating actuator will be controlled through this communication object.

Table 30

4.4.4.2 PI PWM

2.2.255 Thermostat > Heating Control

| | | |
|-----------------------|----------------------------|---|
| General | Controller Type | PI - PWM |
| Rocker 1 | Inverse Output | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| Rocker 2 | Proportional Gain KP | 24 |
| Temperature Sensor | Integral Gain KI (1/1000) | 9 |
| Thermostat Parameters | Maximum Control Signal (%) | 100 |
| Heating Control | Minimum Control Signal (%) | 5 |
| Cooling Control | Pwm Cycle (in min) | 10 |

Figure 15

For more information how the PI parameters and PWM cycle should be selected Chapter 4.4.3.2

4.4.4.2.1 Parameters

| Parameter | Setting | Description |
|----------------------------|------------------|---|
| Inverse Output | Enable / Disable | Invert the output of the controller. For example if normal output is "On", then inverted output is "Off". |
| Proportional Gain KP | 1...24...255 | Proportional gain of PI algorithm |
| Integral Gain KI (1/1000) | 1...9...255 | Integral gain of PI algorithm, given value divided by 1000. |
| Maximum Control Signal (%) | 0...100 | Maximum control signal value. |
| Minimum Control Signal (%) | 0...5...100 | Minimum control signal value. This value must be given compatible with PWM cycle. *[4] |
| PWM Cycle (in min) | 1...10...255 | PWM cycle. |

Table 31

*[4] "PWM Cycle" and "Minimum Control Signal" parameters should be configured considering the limitations of the actuator. For example; when actuator is Solenoid valve with a response time of 120 seconds,

- PWM cycle configured as 10 minutes (Chapter 4.4.3.2)
- "Minimum Control Signal" should be bigger than $120 * 100 / (10 * 60) = \%20$
- PWM cycle configured as 20 minutes
- "Minimum Control Signal" should be bigger than $120 * 100 / (20 * 60) = \%10$

4.4.4.2.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|----|--------------------|----------|--------------------|-------|
| 61 | Heat Control Value | Send | 1 bit DPT 1.002 | CT |

Heating actuator will be controlled through this communication object.

Table 32

4.4.4.3 On/Off

2.2.255 Thermostat > Heating Control

| | | |
|--------------------|--------------------------|---|
| General | Controller Type | On/Off |
| Rocker 1 | Cyclic Interval (in min) | 5 |
| Rocker 2 | Inverse Output | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| Temperature Sensor | Hysteresis (1/10 K) | 30 |

Figure 16

Heating control parameters for on/off controller type should be configured here. For more information about on/off controller read Chapter 4.4.3.3.

4.4.4.3.1 Parameters

| Parameter | Setting | Description |
|---------------------|------------------|---|
| Cyclic Interval | 1...5...255 | Time period to send heating control value over "Heating Control Value" communication object. |
| Inverse Output | Enable / Disable | Invert the output of the controller. For example if normal output is "On", then inverted output is "Off". |
| Hysteresis (1/10 K) | 1...30...255 | Hysteresis value (Chapter 4.4.3.3) |

Table 33

4.4.4.3.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|----|--------------------|----------|--------------------|-------|
| 61 | Heat Control Value | Send | 1 bit DPT 1.002 | CT |

Heating actuator will be controlled through this communication object.

Table 34

4.4.4.4 Fan Coil

| 2.2.255 Thermostat > Heating Control | |
|--------------------------------------|---|
| General | Controller Type FanCoil |
| Rocker 1 | Cyclic Interval (in min) 5 |
| Rocker 2 | Inverse Output <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| Temperature Sensor | Proportional Gain KP 66 |
| Thermostat Parameters | Integral Gain KI (1/1000) 32 |
| Heating Control | Maximum Control Signal (%) 100 Minimum Control Signal (%) 0 |
| Cooling Control | Transmit On Modification <input checked="" type="radio"/> Enable <input type="radio"/> Disable |

Figure 17

Heating control parameters for fan coil controller type should be configured here. For more information about on/off controller read Chapter 4.4.3.4.

4.4.4.1 Parameters

| Parameter | Setting | Description |
|----------------------------|------------------|---|
| Cyclic Interval | 1...5...255 | Time period to send heating control value over “Heating Control Value” communication object. |
| Inverse Output | Enable / Disable | Invert the output of the controller. For example if normal output is %80, then inverted output is %20. |
| Proportional Gain KP | 1...66...255 | Proportional gain of PI algorithm |
| Integral Gain KI (1/1000) | 1...32...255 | Integral gain of PI algorithm, given value divided by 1000. |
| Maximum Control Signal (%) | 0...100 | Maximum control signal value. |
| Minimum Control Signal (%) | 0...100 | Minimum control signal value |
| Transmit on Modification | Enable / Disable | When control signal change more than (%4), heating control value will be over “Heating Control Value” communication object. |

Table 35

4.4.4.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|--|--------------------|----------|--------------------|-------|
| 61 | Heat Control Value | Send | 1 bit DPT 1.002 | CT |
| Heating actuator will be controlled through this communication object. | | | | |

Table 36

4.4.4.5 Split Unit

| 2.2.255 Thermostat > Heating Control | |
|--------------------------------------|---|
| General | Controller Type: Split Unit |
| Rocker 1 | Cyclic Interval (in min): 5 |
| Rocker 2 | Send On/Off at Control Mode Switchover: <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Temperature Sensor | Communication Error Object: <input type="radio"/> Enable <input checked="" type="radio"/> Disable |

Figure 18

Split unit controller does not directly control temperature, since temperature control is split unit’s responsibility “Current Temperature” and “Current Setpoint” communication objects should be linked to split units “Ambient Temperature” and “Setpoint Temperature” communication objects.

4.4.4.5.1 Parameters

| Parameter | Setting | Description |
|--|-------------------------|---|
| Cyclic Interval | 1...5...255 | Time period to send heating control value over “Heating Control Value” communication object. |
| Send On/Off at Control Mode Switchover | Enable / Disable | Enables “Split Heat” communication object, can be used to open/close the split unit when a control mode change occurs. |
| Communication Error Object | Enable / Disable | Enables “Split Heat Error” communication object. “True” telegram from this communication objects cause the thermostat to enter “Protection Mode” with error. (For more information Chapter 4.5.2) |

Table 37

4.4.4.5.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|---|------------------|------------|--------------------|-------|
| 51 | Split Heat | On/Off | 1 bit DPT 1.001 | CT |
| Visible if “Send On/Off at Control Mode Switchover” parameter enabled. This communication object is not a control object, it will send “True” when control mode is “Heat” and “False” when control mode is “Cool” and can be used to enable the split unit. | | | | |
| 53 | Split Heat Error | True/False | 1 bit DPT 1.002 | CW |
| Visible if “Communication Error Object” parameter enabled. “True” telegram causes the thermostat to enter “Protect Mode with Error” and thermostat stay in this state until “False” telegram received (For more information Chapter 4.5.2). | | | | |

Table 38

4.4.5 Cooling Control

Selection of the cooling control type, parameters of the selected control type should be configured here.

| 2.2.255 Thermostat > Cooling Control | | |
|--------------------------------------|----------------------------|---|
| General | Controller Type | PI Continuous |
| Rocker 1 | Cyclic Interval (in min) | 5 |
| Rocker 2 | Inverse Output | <input type="radio"/> Enable <input checked="" type="radio"/> Disable |
| Temperature Sensor | Proportional Gain KP | 66 |
| Thermostat Parameters | Integral Gain KI (1/1000) | 32 |
| Heating Control | Maximum Control Signal (%) | 100 |
| Cooling Control | Minimum Control Signal (%) | 5 |
| | Transmit On Modification | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |

Figure 19

For more information how the PI parameters should be selected Chapter 4.4.3.1

4.4.5.1.1 Parameters

| Parameter | Setting | Description |
|----------------------------|------------------|---|
| Cyclic Interval | 1...5...255 | Time period to send heating control value over “Cooling Control Value” communication object. |
| Inverse Output | Enable / Disable | Invert the output of the controller. For example if normal output is %80, then inverted output is %20. |
| Proportional Gain KP | 1...66...255 | Proportional gain of PI algorithm |
| Integral Gain KI (1/1000) | 1...32...255 | Integral gain of PI algorithm, given value divided by 1000. |
| Maximum Control Signal (%) | 0...100 | Maximum control signal value. |
| Minimum Control Signal (%) | 0...100 | Minimum control signal value |
| Transmit on Modification | Enable / Disable | When control signal change more than (%4), cooling control value will be transmitted over “Cooling Control Value” communication object. |

4.4.5.4.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|----|--------------------|----------|--------------------|-------|
| 61 | Cool Control Value | Send | 1 bit DPT 1.002 | CT |

Cooling actuator will be controlled through this communication object.

Table 46

4.4.5.5 Split Unit

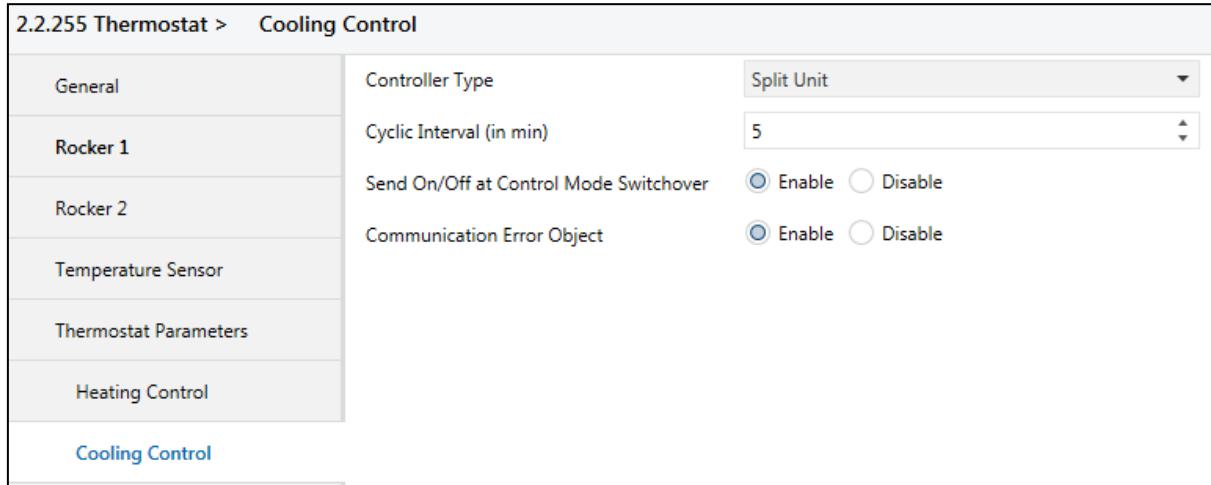

Figure 23

Split unit controller does not directly control temperature, since temperature control is split unit's responsibility "Current Temperature" and "Current Setpoint" communication objects should be linked to split units "Ambient Temperature" and "Setpoint Temperature" communication objects.

4.4.5.5.1 Parameters

| Parameter | Setting | Description |
|--|------------------|---|
| Cyclic Interval | 1...5...255 | Time period to send cooling control value over "Cool Control Value" communication object. |
| Send On/Off at Control Mode Switchover | Enable / Disable | Enables "Split Cool" communication object, can be used to open/close the split unit when a control mode change occurs. |
| Communication Error Object | Enable / Disable | Enables "Split Cool Error" communication object. "True" telegram from this communication objects cause the thermostat to enter "Protection Mode" with error. (For more information Chapter 4.5.2) |

Table 47

4.4.5.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|---|------------------|------------|--------------------|-------|
| 52 | Split Cool | On/Off | 1 bit DPT 1.001 | CT |
| Visible if "Send On/Off at Control Mode Switchover" parameter enabled. This communication object is not a control object, it will send "True" when control mode is "Cool" and "False" when control mode is "Heat" and can be used to enable split unit. | | | | |
| 54 | Split Cool Error | True/False | 1 bit DPT 1.002 | CW |
| Visible if "Communication Error Object" parameter enabled. "True" telegram causes the thermostat to enter "Protect Mode" with error and thermostat stay in this state until "False" telegram received. | | | | |

4.4.6 Fan Control

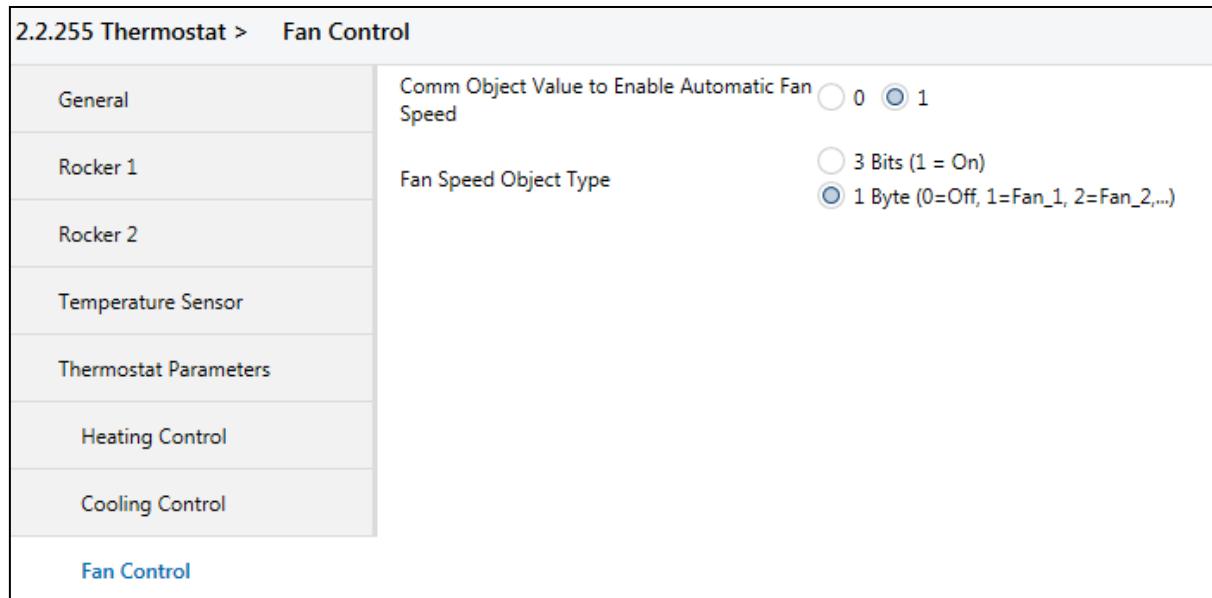

Figure 24

When heating control or cooling control selected as "Fan Coil" or "Split Unit", "Fan Control" tab will be visible. Note that, if both heat and cool controllers configured as "Fan Coil" or "Split Unit", only one set of communication objects and parameters for fan control will be enabled.

When fan control enabled, "Fan Speed" parameters of different operating modes in "Setpoints" tab will also be visible and "LCD Fan Speed" icons will be activated. Since fan speed communication objects are used as control objects and status objects, change in fan speed will be visible from LCD Fan Speed icons.

4.4.6.1 Parameter

| Parameter | Setting | Description |
|---|-----------------|--|
| Comm Object Value to Enable Automatic Fan Speed | 0 / 1 | Telegram value to enable automatic fan speed might differ between different actuators; use this parameter to change the telegram value for enabling automatic fan speed. |
| Fan Speed Object Type | 3 Bits / 1 byte | Selects the data type to control fan speed. |

4.4.6.2 Communication Objects

| No | Object Name | Function | Data Type | Flags |
|---|---------------------|----------|---------------------|-------|
| 66 | Automatic Fan Speed | Send | 1 bit DPT 1.002 | CWT |
| Automatic fan speed will be enabled/disabled through this communication object. Telegram value to enable automatic fan speed should be selected in "Comm Object Value to Enable Automatic Fan Speed" parameter. | | | | |
| 67 | Fan Speed | Send | 1 byte DPT 5.010 | CWT |
| | Fan Speed 1 | Enable | 1 bit DPT 1.002 | CWT |
| "Fan Speed" communication object visible when "Fan Speed Object Type" is "1 byte" and fan speed controlled and status received with given values; 0 = Fan Speed 0, 1 = Fan Speed 1, 2 = Fan Speed 2, 3 = Fan Speed 3 | | | | |
| "Fan Speed 1" communication object visible when "Fan Speed Object Type" is "3 bits" and sending "True" telegram to this communication objects sets fan speed to fan speed 1. | | | | |
| 68 | Fan Speed 2 | Enable | 1 bit SPT 1.002 | CWT |
| "Fan Speed 2" communication object visible when "Fan Speed Object Type" is "3 bits" and sending "True" telegram to this communication objects sets fan speed to fan speed 2. | | | | |
| | Fan Speed 3 | Enable | 1 bit DPT 1.002 | CWT |
| "Fan Speed 3" communication object visible when "Fan Speed Object Type" is "3 bits" and sending "True" telegram to this communication objects sets fan speed to fan speed 3. | | | | |

4.5 Setpoints

Setpoints, setpoint limitations, fan speeds and reset on site operations controlled through this parameter tab.

| 2.2.2 Thermostat > Setpoints | | | |
|------------------------------|--------------------------|---|------|
| General | Send Setpoint | <input type="radio"/> Cyclic <input checked="" type="radio"/> Cyclic and Change | |
| | Cyclic time (in sec) | 60 | |
| | Step Value | 0,5 | |
| | Allowed Range(0=disable) | 5 | |
| | Maximum Setpoint | 40 | |
| | Minimum Setpoint | 0 | |
| | Reset on Site | <input checked="" type="radio"/> Enable <input type="radio"/> Disable | |
| | Reset on Site Value | 1 | |
| Setpoints | Comfort Mode | | |
| | Status | Setpoint | 25 |
| | Local Control | Fan Speed | Auto |
| | | Night Mode | |
| | | Setpoint | 23 |
| | | Fan Speed | Auto |
| | Away Mode | | |
| | Setpoint | 21 | |
| | Fan Speed | Auto | |
| | Protection Mode | | |
| | Frost Protection Limit | 5 | |
| | Heat Protection Limit | 40 | |

Figure 25

Current setpoint value can be transmitted over “Current Setpoint” communication object periodically or periodically and when a change occurs. When selected as “Cyclic and Change” minimum difference is defined in “Minimum Difference” parameter at “Temperature Sensor” tab.

4.5.1 Setpoint Limitations

Setpoint limitations can be controlled through “Allowed Range”, “Minimum Setpoint” and “Maximum Setpoint” parameters. “Allowed Range” parameter limits setpoint values relative to the default setpoint values of the operating modes downloaded with ETS when commissioned. “Maximum Setpoint” and “Minimum Setpoint” values are absolute values limit all operating modes setpoints. If relative setpoint limitation conflict with absolute limitation, absolute value overwrites the relative value.

“Maximum Setpoint” must be configured as bigger than “Minimum Setpoint” otherwise these parameter below will be set as minimum and maximum setpoint.

For temperature unit as Celsius (°C): Minimum Setpoint = 0 °C, Maximum Setpoint = 40 °C

For temperature unit as Fahrenheit (°F): Minimum Setpoint = 32 °F, Maximum Setpoint = 95 °F

4.5.2 Operating Modes

Thermostat has 4 operating modes; these are “Comfort Mode”, “Night Mode”, “Away Mode” and “Protect Mode”. Transition from one operating mode to another can be achieved through “Operating Mode Button” on the thermostat or “Operating Mode” communication objects that explained in Thermostat chapter. Additionally, thermostat regulation can be turned off by pressing the “Operating Mode Button” for longer than 7 seconds or sending off (0) to the “Regulation” communication object. While regulation is off, thermostat will only send temperature values over “Current Temperature” communication object. Regulation can be restarted by pressing “Operating Mode Button” or sending on (1) to the “Regulation” communication object.

Comfort, Night, Away Modes

These 3 operating modes have their own predefined setpoint temperatures and, if fan control is used, fan speeds. When thermostat enters an operating mode, current setpoint temperature will be set as that operating modes setpoint temperature and if fan control exists, then fan speed will also be set. When setpoint temperatures or fan speeds for operating modes modified using “Setpoint Buttons”, “Fan Speed Button” or over respective communication objects, new values overwrites the old values and become the new default values for the operating mode.

If Comfort, Night and Away modes setpoint temperatures are not compatible to “Minimum Setpoint” and “Maximum Setpoint” limitations; Comfort, Night and Away mode setpoints sets as closest acceptable values.

Protect Mode

“Protect Mode” differs from other modes by having two setpoint, “Heat Protection Limit” and “Frost Protection Limit”, when thermostats control mode is heat, setpoint will be set as “Frost Protection Limit” and when control mode is cool, setpoint will be set as “Heat Protection Limit”.

“Protect Mode” is also the error mode, when error sources (Window Status, Split Heat Error, Split Cool Error) indicates an error, thermostat will enter “Protect Mode” and will not change its operating mode until error is fixed. Error state will be shown on the LCD by activating “Warning Icon”.

| | | |
|------------------|----------------------------|----------------------------|
| Error | Enter Error Mode Condition | Leave Error Mode Condition |
| Window Status | Open | Close |
| Split Heat Error | True | False |
| Split Cool Error | True | False |

Table 48

When in error mode if another error condition occurs, thermostat will stay in error mode until both errors are fixed.

4.5.3 Reset on Site

Reset on site operation resets the default setpoint temperatures and fan speeds for Comfort, Night and Away modes to their original value which downloaded when commissioned using ETS.

4.5.4 Parameters

| Parameter | Setting | Description |
|----------------------|--|---|
| Send Setpoint | Cyclic / Cyclic and Change | Selects whether setpoint will be send periodically or periodically and change. If selected as change, minimum difference that will trigger a transmission is defined in "Minimum Difference" parameter in "Temperature Sensor" tab. |
| Cyclic Time (in sec) | 10...30...65535 | Cyclic time period to send setpoint from "Current Setpoint" communication object. |
| Step Value | 0,1 / 0,5 / 1 | Increase/Decrease value of current setpoint when "Setpoint Buttons" on thermostat is pressed. |
| Allowed Range | 0...5...30 | Setpoint limitations relative to the operating modes setpoint. (For more information - Chapter 4.5.1) |
| Maximum Setpoint | 0...40...99 | Maximum absolute setpoint limitation (For more information - Chapter 4.5.1). |
| Minimum Setpoint | 0...99 | Minimum absolute setpoint limitation (For more information - Chapter 4.5.1). |
| Reset on Site | Enable / Disable | Enables reset on site operation which resets the default setpoint temperatures and fan speeds to their original value which downloaded when commissioned using ETS. |
| Reset on Site Value | 0 / 1 / Any Value | Select the "Reset on Site" communication object value that will trigger reset on site operation |
| Comfort Mode | | |
| Setpoint | 0...25...99 | Comfort mode setpoint value |
| Fan Speed | Fan Speed 1 / Fan Speed 2 / Fan Speed 3 / Auto | Comfort mode fan speed value |
| Night Mode | | |

| Oria Thermostat PM R2.0 | | |
|-------------------------|---|--|
| Setpoint | 0...23...99 | Night mode setpoint value |
| Fan Speed | Fan Speed 1 / Fan Speed 2 / Fan Speed 3 / Auto | Night mode fan speed value |
| Away Mode | | |
| Setpoint | 0...21...99 | Away mode setpoint value |
| Fan Speed | Fan Speed 1 / Fan Speed 2 / Fan Speed 3 / Auto | Away mode fan speed value |
| Protect mode | | |
| Frost Protection Limit | 0...5...99 | Protect mode control mode heat setpoint |
| Heat Protection Limit | 0...40...99 | Protect mode control mode cool setpoint |

Table 49

4.5.5 Communication Objects

| No | Object Name | Function | Data Types | Flags |
|--|-----------------------|-------------|---------------------|-------|
| 50 | Regulation | On/Off | 1 bit DPT 1.002 | CWT |
| Thermostat regulation can be turned on/off using this communication object. Also, when regulation controlled through "Operating Mode Button" (Chapter 4.5.2) regulation status will be send using this communication object. | | | | |
| 56 | Current Setpoint (°C) | Temperature | 2 byte DPT 9.001 | CRT |
| | Current Setpoint (°F) | Temperature | 2 byte DPT 9.027 | CRT |
| Setpoint value will be send as Celsius or Fahrenheit(configured "Temperature Sensor" tab) using this communication object, when the setpoint will be send explained in Chapter 4.5 | | | | |
| 70 | Setpoint Comfort (°C) | Temperature | 2 byte DPT 9.001 | CW |
| | Setpoint Comfort (°F) | Temperature | 2 byte DPT 9.027 | CW |
| Setpoint temperature for Comfort mode should be set using this communication object. Temperature value should be compatible with selected "Temperature Unit" and setpoint limitations(Chapter 4.5.1) | | | | |
| 71 | Setpoint Night (°C) | Temperature | 2 byte DPT 9.001 | CW |
| | Setpoint Night (°F) | Temperature | 2 byte DPT 9.027 | CW |
| Setpoint temperature for Night mode should be set using this communication object. Temperature value should be compatible with selected "Temperature Unit" and setpoint limitations(Chapter 4.5.1) | | | | |
| 72 | Setpoint Away (°C) | Temperature | 2 byte DPT 9.001 | CW |
| | Setpoint Away (°F) | Temperature | 2 byte DPT 9.027 | CW |
| Setpoint temperature for Away mode should be set using this communication object. Temperature value should be compatible with selected "Temperature Unit" and setpoint limitations(Chapter 4.5.1) | | | | |
| 73 | Reset on Site | Enable | 1 bit DPT 1.003 | CW |
| Reset on site operation should be triggered through this communication object, value to initiate operation should be selected in "Reset on Site Value" parameter in "Setpoints" tab. | | | | |

Table 50

4.6 Status

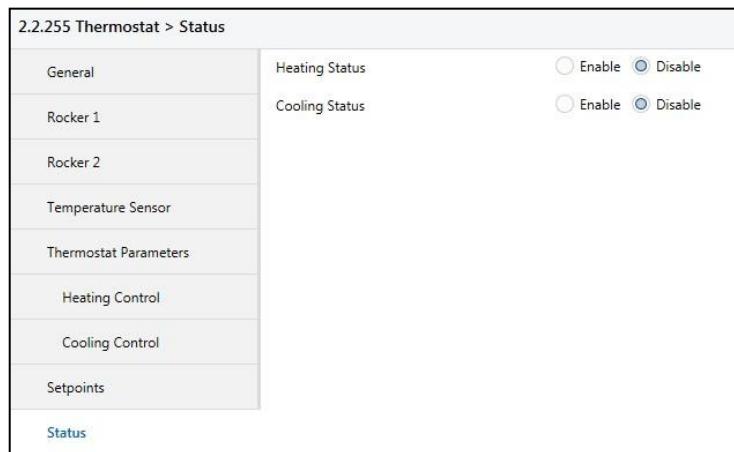

Figure 26

4.6.1 Parameters

Status parameter can be used to enable/disable additional control mode status telegrams. Status telegrams operate the same way as switchover telegrams. But instead of sending switchover telegrams as DPT 1.100 or DPT 20.105, sends 1 bit On/Off (DPT 1.002) telegrams.

| Parameter | Setting | Description |
|----------------|-------------------------|--|
| Heating Status | Enable / Disable | Enable additional heating status communication object. |
| Cooling Status | Enable / Disable | Enable additional cooling status communication object. |

Table 51

4.6.2 Communication Objects

| No | Object Name | Function | Data Types | Flags |
|--|-------------|----------|--------------------|-------|
| 64 | Status Heat | On/Off | 1 bit DPT 1.002 | CRT |
| Heating status will be send through this communication object. (0 : Heating Off, 1 : Heating On) | | | | |
| 65 | Status Cool | On/Off | 1 bit DPT 1.002 | CRT |
| Cooling status will be send through this communication object. (0 : Cooling Off, 1 : Cooling On) | | | | |

Table 52

4.7 Local Control

1.1.20 Thermostat > Local Control

| | | |
|-----------------------|--|---|
| General | Setpoint Button | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Rocker 1 | Fan Speed Button | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Button 1 | Operating Mode Button | <input checked="" type="radio"/> Enable <input type="radio"/> Disable |
| Button 2 | Long Press (2.5s) Actions: - Operating Mode Button: Regulation Off (Short Press for On) - Setpoint +/- Button: Heat/Cool Switchover (If Enabled) | |
| Rocker 2 | | |
| Temperature Sensor | | |

| Heating Control | | |
| Cooling Control | | |
| Fan Control | | |
| Setpoints | | |
| Local Control | | |

Figure 27

4.7.1 Parameters

| Parameter | Setting | Description |
|-----------------------|------------------|--|
| Setpoint Button | Enable / Disable | Enable/Disable setpoint buttons on thermostat. |
| Operating Mode Button | Enable / Disable | Enable/Disable operating mode button on thermostat |

Table 53

When any of the thermostat buttons disabled “Lock Icon” on the thermostat will be activated.

Disabling buttons will not affect secondary functions of those buttons. For example, even setpoint buttons are disabled, long press of setpoint buttons will still operate as backlight dim as explained in Chapter 4.1.1.
